Electronic Hardware

G+ Access System Guarantee

- **1 year limited electrical**
G+ Access Systems.
Gainsborough guarantees to repair or replace the Product if within one (1) year from the proven date of purchase any electrical defects occur.

Salto Guarantee

- SALTO guarantees that all equipment (including locks) and systems (including software) will perform according to specifications. Guarantee is limited to correction of defects, if any, and does not cover changes caused by new circumstances arising after delivery of the system.
- SALTO hardware supplied is warranted for a period of **one (1) year** from the date of installation against manufacturer's defects but does not include damages on the system due to:
1) mishandling, 2) neglect, 3) abuse, 4) contamination, 5) lightning strike, 6) electrical fault, 7) flood/rain/water, 8) fire/extreme temperature, 9) riot/war and 10) act-of-god.
- SALTO card makers and readers are warranted for a period of **one (1) year** from the date of installation against manufacturer's defects but does not include damages on the system due to:
1) mishandling, 2) neglect, 3) abuse, 4) contamination, 5) lightning strike, 6) electrical fault, 7) flood/rain/water, 8) fire/extreme temperature, 9) riot/war and 10) act-of-god.

Lubrication of Locks and Cylinders

Locks

- Gainsborough products are manufactured using a quality lubricant for smooth operation. If the product has been installed in a region subject to extreme climate or subject to a dusty environment, then such conditions may affect the original lubricant and therefore the product may require re-lubrication.
- In this case, the working mechanism may be cleaned with a non-corrosive substance and then re-lubricated with a quality silicone or teflon based lubricant. Do not use lubricant in cylinder (oil or aerosol type).

Cylinders

- When key becomes "sticky" in cylinder, you may sprinkle a small amount of graphite onto the key and then insert the key inside cylinder. Do not use lubricant in cylinder (oil or aerosol type).

Cleaning and care

General Care

- Gainsborough suggests cleaning knobs, roses and plates every two months with a soft, damp cloth. A solution of soap and water could also be used to remove dirt from knobs, roses and other surfaces, but should not be used on cylinders. Ensure liquid does not enter cylinder at any time.
- When cleaning, avoid using acidic or abrasive substances which may contain solvents, i.e cleaning products, as such substances may cause a deterioration of the finish.

Caring for Stainless Steel

- Depending on the environment where the product is used, blemishes can appear on stainless steel product. To help prevent this occurring, clean once a month. Blemishes on satin stainless steel may be removed by rubbing with a suitable stainless cleaner/polish such as Eagle One Original Nevrr-Dull Wadding Polish or Brite Shine Wadding Polish. Ensure rubbing occurs in the same direction as to the grain itself.

Caring for Solid Brass

- Door Accessories (all Solid Brass products)
- Solid Brass products are coated with a durable baked on clear protective lacquer which will significantly retard but will not permanently prevent tarnishing. Coated brass items should be wiped with a soft cloth and occasionally polished with a good non-abrasive wax (following manufacturer's directions). NEVER USE ABRASIVE CLEANERS OR POLISHES ON A BRASS ITEM WITH A PROTECTIVE COATING. Solid Brass can be restored to its original appearance and re-sealed but it inhibits the product's warranty.
- Remember, the nature of brass is to tarnish. The beauty of brass is that it can always be restored to its original finish. Breakdown of the lacquer coating, or natural tarnishing, to which brass is subject, in no way indicates a deterioration of the basic product.
